

## Evidence-Based Practice in Chiropractic Management

ACA supports the principles of evidence-based practice (EBP) as a means to incorporate current best evidence in all aspects of clinical care with the focus on greatest patient benefit. In addition, ACA is opposed to any practice that is unscientific, lacks biologic plausibility, and does not place patient benefit at the forefront.

EBP is a process incorporating best evidence while honoring the values of the patient and the clinician's expertise. The adoption of this Position Statement highlights ACA's support of patient orientated care, professional advancement, and inter-professional collaboration.
